

The Company

In July 2006, Bren Technologies Inc. purchased Petro Coating Systems Ltd. and now boasts the most technologically advanced petrotatum tape manufacturing plant in North America.

Petro Coating Systems (PCS) products are designed to stop, as well as prevent corrosion on pipe, valves, fittings and flanges in the harshest environments imaginable. PCS' products have been used successfully in a variety of applications in the oil and gas, pulp and paper, utility, and wastewater industries, as well as routine building maintenance. PCS is the only North American manufacturing facility making product readily available and eliminating expensive overseas freight costs.

PCS currently manufactures standard, low temperature, high temperature, and marine grade tapes. PCS also offers standard and marine mastics, standard and marine pastes, and an over wrap system for above ground and in-plant applications. Let Petro Coating Systems help your pipe and valves maintain their integrity.

Petrotatum Tape Specifications

1. Chemically inert and does not polymerize or oxidize
2. Free of chemical impurities
3. Repels water, salt, alkalis and acids
4. Temperature range: -45C to 65C
5. Applications can be on already corroded or new installations

Protection Long-term

The environment has a severe impact on metal, producing corrosive elements that damage products such as pipelines. PCS' products are designed to help eliminate damage against your assets. Replacing and/or repairing broken pipelines or materials - above or below ground - can be extremely expensive. Taking initiative to properly secure pipelines and other materials is the first step to ensuring long-term success of your products. Utilizing PCS' high quality products also assists with long-term growth of customer satisfaction.
